

AUSTRALIAN ALPS

WALKING TRACK

AUSTRALIAN ALPS WALKING TRACK

AUSTRALIAN ALPS

# **STRATEGY & OPERATIONAL PLAN**

**Works Program 2008-2010**

**July 2008**

Prepared by Neville Byrne for the Australian Alps Liaison Committee

## Executive summary

The Australian Alps Walking Track (AAWT) is Australia's premier long-distance walking track for seasoned and self-sufficient walkers seeking remote experiences; and also offers a range of shorter-walk opportunities for less experienced and less-skilled walkers to appreciate the beauty of the Australian Alps.

This strategy clarifies the purpose of the Australian Alps Walking Track and sets the scene for its management for a range of visitor experiences.

The Strategy is a tool to encourage States and the Territory to work co-operatively to manage and promote the route of the AAWT as a continuous entity with a range of walking opportunities, and to identify opportunities and initiatives to further improve the track and its promotion.

The **Strategy** outlines the long-term directions for the management and promotion of the AAWT and seeks:

- consistent presentation of the AAWT regardless of tenure,
- promotion consistent with the park management objectives,
- management consistent with the expectations of both long-distance walkers, and in popular sections with the expectations of those with less skills or experience,
- marketing to domestic and international experience seekers, and
- partnerships to optimise use and management of the AAWT.

The **Works Program** highlights significant actions on the AAWT which will be formulated biennially and endorsed by the AAWT Management Group.

The **Operational Plan** specifies medium-term on-ground standards for maintenance and presentation of the AAWT; and is an important vehicle for ensuring consistency of presentation of the track and for communication and information sharing. It specifies standards and operational arrangements for:

- Administration and Oversight
- Managers' Responsibilities
- Approved route of AAWT
- Track Standards
- Signage and Marking
- Facilities
- Accommodation and Camping
- Minimal Impact Code
- Permits and Conditions
- Promotion and Community Education
- Information and Publications
- Stakeholders and Volunteers
- Aboriginal Community Consultation

## • Background to the Australian Alps Walking Track

Since the mid 1930's, conservationists dreamt of creating a continuous protected area of national parks to across the Victorian high country. This interest became even stronger with the dedication of the Kosciuszko National Park in New South Wales and its proximity to the mountain areas in Victoria.

In the early 1970's, bushwalkers began establishing a long-distance walking track from near Melbourne to the New South Wales border at Tom Groggin. This long-distance walking track soon became known as the **Alpine Walking Track (AWT)**.

The AWT followed logging roads and existing walking routes to link many of the highest ridges and mountain peaks in the Victorian Alps, and was marked with a variety of markers, but predominantly a yellow diamond bearing an illustration of a pair of walking legs and the words "Alpine Track".

The formation in 1986 of the cross-border co-operative management program between the national parks managers within Victoria, New South Wales, the Australian Capital Territory and the Federal Government saw interest develop in finding a symbol of the unification of the mountain protected areas.

Agreement was reached on a route for the Australian Alps Walking Track to divert and extend the Alpine Walking Track through the new links of the Alpine National Park, into and through Kosciuszko National Park and subsequently through Namadgi National Park in the ACT.

The track was uniformly marked according to guidelines drafted by all the land managers along the route from Walhalla in the south to the Namadgi Visitor Centre in the ACT.

In 1989, a month-long trek through the Australian Alps National Parks closely followed the Australian Alps Walking Track and celebrated the dedication of Victoria's Alpine National Park and the unification of a contiguous protected area from near Canberra to Mt MacDonald in Victoria.

The route of the Australian Alps Walking Track is mostly contained within the Namadgi, Kosciuszko and Alpine National Parks but also crosses State Forest land between near Mt Skene and the Baw Baw National Park and again from the Baw Baw National Park to Walhalla; and passes through a range of other reserves including Historic Areas (e.g. Mt Murphy, Mt Wills) and Natural Features & Scenic Reserves (e.g. Mt Skene).

In 1989, the Upper Yarra Track also provided a link from the AAWT to public transport access at Lilydale on the outskirts of Melbourne.

The marking along the AAWT has been standardised in line with the Australian Standard for marking walking tracks and has led to the replacement of the yellow diamond and walking legs with a standardised isosceles triangle shape consistent with the Australian Standard. Colours used for these triangles ranged from a pale blue in 1989 to a more visible yellow (reflective and non-reflective) by the early 2001.

Wildfires in 2003 across much of the alpine area, and again in 2006-07 within parts of the Victorian high country, destroyed much of the marking along the route and led to prolific regrowth of snow gums, mountain and alpine ash and many other high altitude species. This regrowth created difficulties with navigation and physically moving along the AAWT. Clearance programs (primarily between 2004 and 2008) resulted in the AAWT being re-opened in 2008 after sections were closed due to risk concerns in heavily burnt areas.

## Context of the Australian Alps Walking Track

The Australian Alps Walking Track (AAWT) traverses some of Australia's highest mountains from the doorsteps of Canberra to the forested country east of Melbourne. The track passes through Namadgi, Kosciuszko, Alpine and Baw Baw National Parks as it crosses state boundaries between the Australian Capital Territory, New South Wales and Victoria.

The track covers a total of 650km of south-eastern Australia's mountain country including spectacular tracts of alpine and sub-alpine scenery, iconic rivers such as the Murrumbidgee, and the headwaters of the Snowy, the Murray and the Mitta Mitta. It crosses large expansive wilderness areas and takes in the highest mountains of Australia. It links a landscape of not only natural beauty but of human occupation, exploration, hardship, nation building and endeavour through the legacy of Aboriginal routes, stockmen's huts, fences, old towns, ruins and former sites of mining and hydro-electric endeavours.

Walkers can start the track at either Walhalla or Canberra or many points in between. The entire walk can take anywhere from four to ten weeks in total but many people choose to walk sections, particularly in the Brindabella, Jagungal, Bogong High Plains or Baw Baw areas. It is not a continuous formed walking track but a connection of linked tracks, management trails, informal routes and unmarked areas where good navigation skills are required. There are several commercial guides who can assist walkers to enjoy short sections of the Track.

While initially conceived and developed as a long distance walking track, the AAWT has now taken on a variety of forms depending on the user and the support they are able to organise.

Current users are diverse and the range includes:

- short trip walkers who use part of the AAWT as a section or loop as part of a more localised walk;
- day walkers who venture onto a popular section of the AAWT as part of a visit to a local feature or short walk
- **walkers supported by commercial tour operators and/or standing camps in several short sections of the AAWT**
- track runners carrying light loads who attempt to complete the full 650 km distance in the shortest possible time, sometimes as short as four weeks; and
- end-to-end walkers who either:
  - plan food caches and rest stops along the entire walk and then proceed from one end to the other over 6-10 weeks; or
  - individuals and groups who attempt a section of the track each year, progressively completing the entire distance;

With the development of Australia's international tourism marketing focus on visits by *Experience Seekers* to extensive natural landscapes (of which the Australian Alps is one), awareness and interest in walking some or all of the Australian Alps Walking Track is expected to increase.

**One of the five key directions of the Victorian Nature-based Tourism Strategy (2007-2011) includes the aim of "establishing the Wild Walks of Victoria with a high yield commercially-run walking component with demountable standing camps/accommodation which does not limit public access".**

**This is already being reflected in the establishment of a standing camp within State Forest in the AAWT section between Baw Baw National Park and Walhalla in conjunction with the promoters of the Great Walhalla Alpine Trail.**

**This Nature-based Tourism Strategy also promotes partnerships towards new infrastructure (such as accommodation on long-distance walking trails).**

*The Victorian Trails Strategy 2005-2010 suggests the development of “linking trails to the Australian Alps Walking Track between Mt Hotham and Falls Creek with accommodation outside the Alpine National Park”.*

In its entirety, the Australian Alps Walking Track has been developed only to a level suitable for persons with extensive overnight bushwalking experience and the skills to navigate and be self-sufficient either by themselves or in their walking group.

Navigational aids along the length of the AAWT are neither meant to provide a regular marker system nor are they maintained to a consistent level. There are sections of the AAWT that pass through wilderness or untracked areas that have few if any markers to guide the walker along the correct route.

Map-reading skills and up-to-date detailed maps are considered essential for completing most sections of the Australian Alps Walking Track.

Being in a mountain environment, weather conditions can change rapidly and low cloud and snow can seriously affect navigation and progress.

Never-the-less, there are some sections of the Australian Alps Walking Track that are very well marked and maintained and where extensive navigation or bushwalking experience is neither required nor expected. Land managers will use and maintain these sections of the Australian Alps Walking Track as popular walking tracks to local features and for short loop walks.

Commercial operators will also be encouraged to provide additional short-duration supported walks using existing or purpose-built accommodation where this is feasible.

In high use and popular sections of the Australian Alps Walking Track, regular interactions with other walkers and other modes of recreation can be expected and facilities will be common to assist and inform less experienced walkers to allow them to have a safe and enjoyable walking experience.

# 1. Vision

The **Australian Alps Walking Track** will be recognised both as:

- a) Australia's premier long-distance walking track for self-sufficient walkers seeking remote experiences, and as
- b) a range of shorter-walk opportunities for less experienced and less-skilled walkers to experience the beauty of the Australian Alps.

# 2. Strategic Management Directions

1. The AAWT will have a consistent presentation in similarly-zoned park environments in the Australian Alps regardless of tenure by:
  - a. maintaining marking and management standards as detailed in the Operational Plan;
  - b. regular contact between land managers responsible for sections of the AAWT; and
  - c. promoting sections of the AAWT in a manner consistent with the management objectives of park zones, including wilderness areas.
2. The entire length of the AAWT will be managed for those seeking remote walking opportunities by:
  - a. maintaining a relatively low level of facilities and marking,
  - b. promoting self-sufficiency (e.g. navigation, overnight accommodation),
  - c. promoting minimal impact philosophies, and
  - d. **where feasible minimising interactions with vehicular traffic.**
3. Short, high-profile or popular sections of the AAWT will be managed and promoted for those who seek to experience a small portion of one of Australia's iconic long distance walks, but who generally lack the time, skills, equipment or experience to be self-sufficient by:
  - a. encouraging skilled tour operators to develop short walk opportunities,
  - b. identifying and well-marking short sections of the AAWT that link popular features or destinations, and
  - c. **promoting partnerships to developing sustainable accommodation for 2-5 day walks on the AAWT with commercially-guided opportunities.**
4. The AAWT will be marketed to domestic and international visitors as one of the best opportunities for the *Experience Seeker* market to immerse themselves into the natural and cultural features of the Australian Alps through its promotion as one of the journeys possible through the Australian Alps national landscape.
5. New partnerships will be encouraged to optimise use and management of the AAWT and its promotion, including with volunteers, commercial interests and nearby tourism operators (e.g. resorts).

### 3. Action Plan for 2008 – 2010

Task	Specific detail	Priority/Year
AAWT Strategy	New AAWT Strategy approved by AALC	2008
Trailhead signs	Install new/upgraded trailhead signage	2008
Biennial stakeholder meeting	Conduct stakeholder meeting (May Tumut)	2008
Recycled totems	Commence trials of recycled plastic totems	2008
Guidebook	Support update of Siseman/Chapman guide book	2008
User information & feedback	Review and improve feedback and information mechanisms	High (e.g. 08/09)
Web-based information	Update map guide and notes to web-format for planning purposes	High (e.g. 08/09)
Track classification	Incorporate track section classifications as DSE project is finalised	High (e.g. 08/09)
Wilderness entry & interpretation signs	Develop common words for use on wilderness entry signs and on interpretive signs for short walks etc	Medium (e.g. 2009)
Additional AAWT branding	Investigate appropriate AAWT collateral to improve awareness and understanding of AAWT	Medium (e.g. 2009)
Introductory short walks	Identify and promote 2-4 day introductory walks or loops onto the AAWT and link to other initiatives (e.g. 10 Great Walks, demountable standing camps/accommodation)	Low (e.g. 2010)
AAWT Strategy	Update AAWT Works Program	2010
Recycled totems	Report on trials of recycled plastic totems	2010
Biennial stakeholder meeting	Conduct stakeholder meeting (Victorian location)	2010

## 4. Operational Plan

On ground management of the AAWT is the responsibility of the respective states and territory as a part of their overall visitor asset infrastructure and maintenance programs.

The coordination of AAWT management across the respective jurisdictions is facilitated through members of the AAWT Management Group which reports through the AANP Visitor Experiences and Marketing Reference Group. This group is made up of park and forest managers with responsibility for sections of the AAWT.

The AAWT Management Group is guided by input from the AAWT Stakeholders Group, which includes peak conservation and bushwalking bodies and commercial guiding and marketing interests...

For the majority of the AAWT, land managers will strive to keep the AAWT open and marked for self-sufficient and experienced walkers to the extent that navigation is only occasionally a significant challenge and that travel along the track is not continuously reduced below a slow walking pace as a result of fallen vegetation and regrowth.

### 4.1 Administration and Oversight

Individual State and Territory land managers have the ultimate responsibility for how and to what extent they manage and maintain their sections of the Australian Alps Walking Track.

They will be offered assistance and support to manage their section(s) of the Australian Alps Walking Track in a manner consistent with the overall strategic directions (see above) and in co-operation with adjacent land managers with responsibility for the AAWT.

In particular, an AAWT Management Group will regularly convene to discuss common management issues, initiatives and directions and promote a spirit of co-operation to manage the AAWT in as consistent a manner as is possible.

The AAWT Management Group will comprise all local land managers with responsibility for a section of the AAWT. The Management Group will include the Department for Sustainability and Environment which is responsible for approximately 94 kilometres of AAWT in Victorian State Forests.

The Management Group will discuss common issues and approaches at least every six months and more frequently if convenient electronically and/or face to face. The Management Group will be responsible for also ensuring that proposed projects for inclusion in the biennial AAWT works program are put forward for funding and implementation.

#### **Terms of Reference of AAWT Management Group**

- promote management of the AAWT consistent with the AAWT Strategy, the Operational plan and individual Agency policies,
- provide a co-operative forum to discuss management techniques and support on-ground management of the AAWT
- co-ordinate and implement joint projects to raise awareness of and sustainable management of the AAWT
- ensure AAWT management issues beyond the capacity of the Management Group are referred to the Australian Alps Liaison Committee for consideration

In addition, the AAWT Management Group will be supported by an AAWT Stakeholder Group comprising persons with an interest in:

- conservation of the Alps national parks (e.g. National Park Associations)
- walking in mountain environments (e.g. peak walking organisations), and
- commercial support of walkers in mountain environments (e.g. information, accommodation and guiding).

The Stakeholder Group will be brought together every two years and membership of the Stakeholder Group will not be unduly restricted for any person meeting one or more of the above criteria, save for the logistics and organisation of meetings and administration of the Stakeholder Group and the principle that normally each stakeholder group or organisation would only need to be represented by one person at meetings.

**Terms of Reference of AAWT Stakeholder Group**

- to provide advice and support to land managers in their management of the AAWT;
- to regularly review the Strategy and Operations Plan for the AAWT and recommend changes;
- assist in the development of a biennial works and promotion program which the management agencies will seek to implement;
- as appropriate, promote and support the AAWT to external bodies including conservation, tourism and recreation interests.

The Australian Alps Liaison Committee will provide financial and administrative support to both the Management Group and the Stakeholder Group to allow them to fulfil their respective Terms of Reference and will consider funding projects brought forward by the groups through the Visitor Experiences and Marketing Reference Group on a competitive basis with project bids from other Reference Groups, as the AANP Program budget allows.

## 4.2 Managers' Responsibilities

Respective land managers will:

- maintain the AAWT to the desired classification / standard for each section;
- provide up to date information about conditions along the track;
- install agreed signs to a consistent standard;
- ensure markers and signs are sufficiently maintained or replaced if necessary;
- promote appropriate use through programs such as "leave no trace" and minimal impact ethics;
- with the agreement of Aboriginal communities, recognise and interpret Aboriginal connection to the Alps including any traditional pathways which are coincident with the AAWT; and
- raise the profile of the AAWT through appropriate information and opportunities.

## 4.3 Approved Route

The approved and official route of the AAWT will be defined (and may periodically be changed) by the respective management Agencies in line with their park management zoning, operational and safety requirements.

The current official route (2008) is described in the guidebook *The Australian Alps Walking Track* (Siseman/Chapman). This guidebook may also indicate alternative routes which will not be managed or marked as part of the Australian Alps Walking track by the respective land managers, but may provide interesting alternatives to the official route.

The AAWT serves as the 'backbone' for many other possible routes and loops. Both short and long alternative walks may join and use part of the Australian Alps Walking Track. In addition, popular feeder routes to reach the AAWT from easily accessed locations may also be described.

The opportunities are endless given a map, compass and a little imagination. The official route is the only one that will be signed and branded with the AAWT markers (see Signage and Marking). Signage of any feeder routes, offshoots or alternatives will be at the discretion of the respective management agency. These tracks will not be signed or branded with AAWT markers.

Following the 2003 fires sections of the AAWT were closed in each state and were progressively re-opened throughout 2003-2004.

In the Australian Capital Territory (ACT) the fires have provided an opportunity to undertake some re-routing of the track from the Tharwa Visitor Centre to Booroomba Rocks. Work to re-open the track has included safety inspections, replacement of fire damaged signs and totems, re-routing and minor clearing works.

The latest version of the Kosciuszko National Park Management Plan (2006) retains the exiting official route:

*“Retain the route of the Australian Alps Walking Track (AAWT) along the Dead Horse Gap Track, Kosciuszko Walk and Summit Walk from Rawson Pass to Charlotte Pass. In order to protect the outstanding values of the area and retain the current range of alpine walking experiences, the AAWT will not be re-routed to traverse any other part of the Main Range (Section 8.6)”.*

The 2007 alpine fires in Victoria again impacted on sections of the AAWT, particularly from Mt Skene to Mt Hotham. Clearing of 2003 fire regrowth and fallen and high risk trees has been a major post-fire recovery program for Parks Victoria. Numerous burnt and damaged markers and totems were replaced throughout the Alpine National Park in early 2008. Sections of the AAWT may still be difficult to follow depending on the extent of regrowth, the level of visitor use to maintain a clear path and the presence of animal pads which may confuse navigation along the correct route.

The 2003 and 2006/2007 bushfires also destroyed a number of historic and other huts which the AAWT passed. Some of these huts are being rebuilt or replaced for public safety purposes and to continue to recognise historical connections with the mountain area.

## **4.4 Track Standards**

There is a national standard that describes the style of construction and maintenance of different walking tracks (Australian Standard AS:2156.1 2001).

This Australian Standard was developed with input and support of all Australian managers of walking tracks in natural areas and organisations representing walking throughout Australia.

The Standard identifies six different levels for track design construction and maintenance to provide for access by people with a wide range of skills, physical capabilities and motivations. (See Appendix 1)

The AAWT across its entire length varies from a highly constructed purpose built walking track to a remote cross-country ramble. In reviewing the map guide and track notes the track will be classified according to the Australian Standard for walking tracks (AS2156.1 – 2001).

Australian Standard AS 2156.2 provides guidance for the construction of infrastructure (e.g. boardwalks, steps, railings) along different walking tracks.

## **4.5 Signage and Marking**

Track signage and marking is designed to provide assistance to walkers and to instil a relationship between the walker and the AAWT. It is not intended that the AAWT be marked at set intervals; nor is it intended to be followed without map, compass or the necessary pre-trip planning.

### **4.5.1 AAWT Totem Markers**

All intersections along the length of the AAWT will be marked with approved intersection and confirmation totem markers (except as wilderness area management zones may

otherwise dictate). These markers are designed to confirm the walker's direction of travel at otherwise unsigned intersections. These markers are also a means of branding the track along its route. (See Appendix 4)

Intersection totems will have an AANP logo and two AAWT yellow triangles; and confirmation totems will bear only one AAWT yellow triangle.

Trials commenced in 2008 of a recycled plastic, fire retardant substitute for the intersection and confirmation totem to move towards a more sustainable product and to reduce the reliance on (and long-term disposal problems associated with) the traditionally-used CCA treated pine totems.

A small stockpile of recycled plastic totems, logos, arrows and markers is held at the Mt Beauty Parks Victoria Office for distribution as needed.

#### **4.5.2 AAWT track head and key access signs**

AAWT trackhead and key access signs are designed to provide an overview of the location of the whole of the AAWT and to raise awareness amongst casual visitors to trailheads or at key access points.

An inventory of existing major and minor trailhead and key access signs is shown in Appendix 2. These signs are designed to provide general park visitors, as well as AAWT users, with basic information about the AAWT. They are not intended to be used as directional signs or for pre-trip planning.

A series of new signs promoting the AAWT and short walks along that section of the AAWT were produced and installed in early 2008. The location of these short walk signs is included in Appendix 2.

#### **4.5.3 Wilderness Areas Entry Signs**

The AAWT passes through, the Razor/Viking, Cobberas, Pilot, Jagungal and Bimberi Wilderness Areas. In all wilderness areas the AAWT will generally be unmarked. Markers will only be used in exceptional circumstances and kept to an absolute minimum (see Appendix 4). Agencies will be encouraged to erect wilderness entry signs close to wilderness boundaries along the AAWT, advising walkers the track is generally unmarked through these areas.

### **4.6 Facilities**

It is not intended to develop the Australian Alps Walking Track into an 'Overland' or 'Milford' track where huts and other facilities are provided along the way. Some sections will continue to be developed and suitable for short day walks, however the bulk of the walk will continue to be a 'remote – natural' experience. Walkers will continue to be required to be independent, fully self sufficient, capable of remote area navigation and have carried out proper pre-trip planning.

Never-the-less, with international marketing of the Australian Alps landscape, more tour operators are expected to offer short guided walks between existing accommodation centres and resorts.

Only basic facilities will be provided by Agencies for AAWT walkers such as:

- Basic marking and sign posting as described above (signage and marking)
- A track developed to the agency specified classification/standard.
- Camping areas, carpark and picnic areas at some major intersections and trailhead areas of the AAWT which are provided as part of the overall park infrastructure.

- Existing or replaced huts where they are consistent with the policies of the Agency.
- Discrete water collection points in regularly dry areas.

#### **4.7 Accommodation and Camping**

Accommodation is not specifically provided for AAWT users. There are huts along the track that may provide emergency shelter, however track users are expected to be self sufficient, carry camping equipment and should, like all other users, not be reliant upon huts for accommodation or shelter.

Walkers often choose to make use of commercial accommodation at resort areas or nearby settlements along the AAWT, as lay-over or rest-and-replenish stops along the route or as the start and finish of short walks that incorporate part of the AAWT.

#### **4.8 Minimal Impact Code**

All information and promotion of the AAWT will include references to the AANP Minimal Impact Code and the Hut Code.

The agencies will promote minimal impact codes and practices through;

- Publications relating to the AAWT
- AANP and agency web sites
- Permit system where applicable
- Trailhead signs
- Visitor centres

#### **4.9 Permits and Conditions**

It is not intended to introduce permits or special conditions specific to walkers using the Australian Alps Walking Track in the foreseeable future. Walkers however must comply with “local” requirements for permits, park regulations and other specific conditions along sections of the track as detailed in appendix 3.

Commercial operators using the AAWT for part of their business must hold a current licence from the relevant land manager.

#### **4.10 Promotion and Community Education**

The underlying principle of promoting the AAWT is to make the community aware of the Australian Alps as an entity – a vast, fragile and unique region that transcends State and regional boundaries. This principle will align closely with the international marketing of the Australian Alps as one of Australia’s National Landscapes.

Accurate promotion of the AAWT should aim to emphasise:

- appropriate minimal impact behaviour,
- self sufficiency with food, camping and first aid equipment,
- need for a high level of navigational and bushwalking skills and leadership,
- remote and rugged nature of the terrain,
- extreme climate of the Alps, and
- the variety of walking opportunities and track conditions from highly formed vehicle tracks, to areas with no marking or track that require cross-country navigation skills and experience.

With the development of Australia's international tourism marketing focus on visits by *Experience Seekers* to extensive natural landscapes, the AAWT promotion to international visitors is expected to increase.

Managers may encourage partnerships and opportunities for less experienced visitors to safely enjoy sections of the AAWT through commercial guided tours and programs from resorts and other nearby accommodation where these options are consistent with the management plans governing that section of the Australian Alps Walking Track.

#### 4.11 Information and Publications

Information on the Australian Alps Walking track is variously available from:

- the Australian Alps Walking Track web-page (planning info only);
- the guidebook ***The Australian Alps Walking Track***;
- track notes from individuals and clubs;
- internet-based bushwalker forums.

The route of the AAWT is well-documented and described in track notes in the publication "***Australian Alps Walking Track***", ***Walhalla to Canberra***" by John Siseman/ J&M Chapman. This publication was first released in 1988 and has seen revisions and subsequent editions in 1993 and 1998. A further revised edition is also nearing publication in 2008. The author and publishers of the '*Australian Alps Walking Track*', will be kept up-to-date with changes to the 'approved route' and any other relevant issues.

Topographic maps are available showing the AAWT.

The AALC will continue to provide and update a general information brochure on the AAWT, and this will be attached to the Australian Alps Walking track webpage.

Relevant mapping authorities and publishers will continue to be advised of changes to the 'approved route' to ensure that the correct route is shown when they review and reprint their maps. The mapping authorities should be contacted on a regular basis as a reminder that the additions/changes are required.

#### 4.12 Stakeholders and Volunteers

Bushwalking clubs, conservation groups and other organised groups in each state have a close affinity with the AAWT or with respective sections of the track.

The use of volunteer groups to assist with information about track conditions and potential care-taking and/or maintenance programs will be encouraged through the respective agencies at a local office level.

Often these groups have a greater or more up-to-date knowledge of track condition and issues than the responsible park agency. Access to this information would be of assistance in managing the AAWT. Web-access will be identified to provide an interactive tool for individuals and groups to provide updated information on the condition of the AAWT.

Those with a commercial interest in the Australian Alps Walking Track (e.g. guidebook producers, commercial guiding companies) may also be members of the AAWT Stakeholder Group.

Appendix 5 contains the current membership of the AAWT Stakeholder Group and their contact details.

#### 4.13 Aboriginal community consultation

Much is already known about the routes and pathways into and through the mountains that Aboriginal people traditionally used for ceremony, food and social interactions (e.g. Kabaila,

P. (2005) *High Country Footprints: Aboriginal Pathways and Movement in the High Country of Southeastern Australia – Recognising the Ancient Paths Beside Modern Highways*.

It is not proposed to separately investigate additional traditional routes that might be coincident with the AAWT, but relevant Aboriginal communities will be consulted with respect to any major changes to the AAWT or information highlighting Aboriginal connection to the land around the AAWT.

## Appendix 1 AAWT – Track Classification System

	General description	Key track characteristics
 <p>All access path (Class 1)</p>	<p>Opportunity for large numbers of visitors, including those with reduced mobility, to undertake walks which are provided with a high level of interpretation and facilities.</p> <p>Users can expect abundant opportunities to learn about the natural environment through interpretive signs or brochures. Users can expect frequent encounters with others.</p>	<p>Generally a broad, hard surfaced track suitable for wheelchair use. Steps allowed only with alternate ramp access.</p> <p>Width: 1200 mm or more. Well maintained with minimal intrusions.</p> <p>Facilities along the track may include lookout platforms, seats and barrier rails.</p> <p>Users need no previous experience and are expected to exercise normal care regarding their personal safety.</p>
 <p>Graded path (Class 2)</p>	<p>Opportunity for moderate numbers of visitors to walk easily in natural environments which are provided with a moderate to high level of interpretation and facilities.</p> <p>Users can expect to learn about the natural environment with moderate to abundant opportunities to learn through interpretive signs or brochures. Users can expect frequent encounters with others.</p>	<p>Generally a modified or hardened surface.</p> <p>Width: 900 mm or more. Well maintained with minimal intrusions.</p> <p>Facilities along the track may include lookout platforms, seats and barrier rails.</p> <p>Users need no previous experience and are expected to exercise normal care regarding their personal safety.</p>
 <p>Walking track (Class 3)</p>	<p>Opportunity for visitors to walk in slightly modified natural environments requiring a moderate level of fitness and where the provision of interpretation and facilities is not common.</p> <p>Users can expect opportunities to observe and appreciate the natural environment with limited provision of interpretive signage. Users can expect occasional encounters with others.</p>	<p>Generally a modified surface, sections may be hardened.</p> <p>Width: variable and generally less than 1200 mm. Kept mostly clear of intrusions and obstacles.</p> <p>Facilities generally not provided except for specific safety and environmental considerations.</p> <p>Users need no bushwalking experience and a minimum level of specialised skills. Users may encounter natural hazards such as steep slopes, unstable surfaces and minor water crossings. They are responsible for their own safety.</p>
 <p>Hiking track (Class 4)</p>	<p>Opportunity for visitors to explore and discover relatively undisturbed natural environments along defined and distinct tracks with minimal (if any) facilities.</p> <p>Users can expect opportunities to observe and appreciate the natural environment without provision of interpretive signage.</p> <p>Users can expect opportunities for solitude with few encounters with others.</p>	<p>Generally distinct without major modification to the ground. Encounters with fallen debris and other obstacles are likely.</p> <p>Facilities generally not provided except for specific safety and environmental considerations.</p> <p>Users require a moderate level of specialised skills such as navigation skills. Users may require maps and navigation equipment to successfully complete the track. Users need to be self-reliant, particularly in regard to emergency first aid and possible weather hazards.</p>
 <p>Marked route (Class 5)</p>	<p>Opportunity for visitors with advanced outdoor knowledge and skills to find their own way along often indistinct tracks in remote locations.</p> <p>Users can expect frequent opportunities for solitude with few encounters with others.</p>	<p>Limited modification to natural surfaces and track alignment may be indistinct in places. Minimal cleaning and debris along the track. May include steep sections of unmodified surfaces.</p> <p>Facilities generally not provided except for specific safety and environmental considerations.</p> <p>Users require a high degree of specialised skills such as navigation skills. Users need to be self-reliant, particularly in regard to emergency first aid and possible weather hazards.</p>
 <p>Unmarked route (Class 6)</p>	<p>Opportunity for highly experienced walkers to explore remote and challenging natural areas without reliance on managed tracks.</p> <p>Users can expect extended periods of solitude with few encounters with others.</p>	<p>No modification of the natural environment.</p> <p>May include steep sections of unmodified surfaces.</p> <p>Facilities generally not provided.</p> <p>Users require previous experience in the outdoors and a high level of specialised skills such as navigation skills.</p> <p>Users need to be self-reliant, particularly in regard to emergency first aid and possible weather hazards.</p>

Note - The Australian Standard for walking tracks (AS2156.1-2001) has been used as the basis for the tracks classification system. Refer to this Standard for complete details on each class of track. The names and symbols given to each class of track have been applied for ease of use and comprehension and are not derived from the Standard.

## Appendix 2 AAWT – Major Signage inventory management

Location	Sign style*	Status & Actions			
		Dec 2003	Jul 2008		
<b>Victoria</b>					
Walhalla	T	Possible upgrade of panel required			
Mt Erica Carpark	K	Stolen			
Mt Skene	K	Stolen	Key Access sign to be installed		
Mt Loch Carpark	K	Removed for maintenance			
Cope Hut	K	Currently out of date	Key Access sign installed		
Taylors Crossing	K	Burnt; Midway recognition necessary			
<b>New South Wales</b>					
Dead Horse Gap	I	Yes			
Charlotte Pass	I	Yes			
Guthega Power Station	I	Yes			
Kiandra	K	Tailor to suit day users			
Boundary Creek		New stand for reinstallation			
<b>ACT</b>					
Orroral Valley	I	Removed for maintenance – aggressive area; out of date			
Namadgi Visitor Centre	T	Yes			

\*

T = Trailhead sign – Major stand-alone sign/shelter primarily highlighting AAWT

K = Key access sign – low profile sign at popular sites to highlight access to AAWT

I = Interpretation sign – AAWT information integrated into interpretation signage at site

## **Appendix 3                      Permits and conditions**

### **Baw Baw National Park**

- Fire ban restrictions apply.
- Fuel stoves only on the Baw Baw Plateau and above 1200 metres (above Mt Erica carpark)
- Fires in fire places only.
- Limit of 12 people per group on Baw Baw plateau (management plan recommendation).

### **Thompson River Water Supply Catchment**

- Camping permitted only at three locations
- Camping permitted for 3 consecutive nights only in the Catchment
- Fire regulations under the Forest Act
- Fire ban restrictions apply.

### **Alpine National Park**

- Fuel stoves only on the Mount Bogong Massif and Mount Feathertop and approaches
- Fire ban restrictions apply
- Fires in fireplaces only.

### **Kosciuszko National Park**

- Fuel stoves only above and near the tree line
- No camping in the glacial lakes catchment
- Fire ban restrictions apply.

### **Namadgi National Park**

- Permit is required to camp in the Corin sub-catchment.
- Conditions: Camping not permitted within 1km of Corin Dam, camping not permitted within 100m of the Cotter River, camping not permitted within 500m of Cotter House
  - Fishing prohibited
  - Maximum group size is 6
  - Maximum 24 in the Catchment at any one time.
- Permit to Burn required for campfires.
- Fire ban restrictions apply.

Though it is not intended to introduce permits or special conditions to use the Australian Alps Walking Track, the relevant management authorities may possibly introduce new permits, conditions and regulations to all park visitors along popular or particularly sensitive sections of track.

## Appendix 4 Track sign & marking standards

### AAWT Totems

- **Intersection totems** - 0.5 – 1.0 m high, square section approx 125mm X 125mm square totem displaying the AANP's logo and 2x AAWT arrows is to be placed at all intersections along the AAWT. The arrows on the totem will face the walker and indicate both directions of travel.
- **Confirmation totems** – 0.5 – 1.0 m high, 125 – 200 mm X 50mm totem displaying one AAWT arrow will be placed 50m either side of the intersection as confirmation of AAWT direction.

Along vehicle tracks open to the public (i.e. 4WD) totems are to be installed at intersections so they are obvious to people on foot but, if possible, not in vehicles. This should reduce the level of vandalism and removal of logo for souvenirs.

### AAWT Navigational Aid Signs

- Wilderness Entry/Boundary Signs (see Wilderness)
  - Razor Viking Wilderness
  - Cobberas and Pilot Wilderness
  - Jagungal Wilderness
  - Bimberi Wilderness
- Discrete signs, similar to the Wilderness Entry signs, may be necessary to describe routes through untracked or difficult navigation areas.
  - navigational signs will be maintained on the Murrumbidgee River and Port Phillip Trail either end of the Dairyman's Creek untracked section (KNP)
  - untracked areas where navigational signs are installed will be monitored to make sure unwanted tracks do not appear as a result of the signs.

### AAWT Promotional/Educational Signs

- Trail Head Information boards will be maintained at Walhalla and Namadgi Visitor Centre.
- Additional Trail Head Information Panels will be maintained at the following locations (UPDATE THIS LIST):-
  - Mt Erica Carpark
  - Mt Skene
  - Mt Loch Carpark
  - Cope Hut
  - Taylors Crossing
  - Dead Horse Gap
  - Charlotte Pass (incorporated into existing signage)
  - Guthega Power Station
  - Kiandra
  - Boundary Creek
  - Orroral Valley

### **AAWT Markers** (yellow triangular markers 105-110 mm base to apex)

AAWT track markers are intended to improve direction identification in areas of poor track definition within Victoria and other areas where necessary .

- Where the Track is following a well defined vehicle (i.e. Barry Mountains Road) or walking track (i.e. Baw Baw Plateau, Bogong High Plains), *only* AAWT intersection and confirming totems will be required.
- Additional marking will be necessary if the Track is;
  - following a faint foot pad in a forested area;
  - in untracked forested areas, or;
  - as confirmation of the Australian Alps Walking Track, maximum of 2-3 per kilometre.

### **Fixing of Markers**

- Markers are not to be attached to signs.
- Markers to be placed at right angles to the track or line of sight, be clearly visible and with the apex pointing toward the direction to be followed.
- *In Victoria*, yellow markers may be attached to trees, 2m above ground level. In these cases, a 20mm gap should be left between the marker and the outer bark of the tree during attachment.
- Markers to be attached using *two*, 75mm galvanised nails, one above the other (i.e. using vertical holes only), to reduce the likelihood of the marker being deformed by lateral tree growth.

### **Frequency of Markers**

Only the minimum number of markers required to identify the route will to be used:

- i. in forested areas where only a faint foot pad exists markers should be placed on an 'as needs' basis, indicating the direction as required.
- ii. in forested untracked areas markers should be placed within line of sight.
- iii. in areas with multiple and confusing animal pads, markers may need to be placed quite frequently

### **Wilderness Areas**

The AAWT passes through 5 Wilderness Areas, the Razor/Viking, Cobberas, Pilot, Jagungal and Bimberi.

- In wilderness areas the AAWT will generally be unmarked. Markers will only be used in exceptional circumstances (eg. where significant confusion in route might otherwise occur and safety is an issue), and will be kept to a minimum.
- Wilderness entry signs will be located close to wilderness boundaries to explain that the AAWT is unmarked through these areas.
- Wilderness entry signs may also be required where other walking or vehicle tracks intersect or abut the wilderness area, for example the Speculation Road and the Razor-Viking Wilderness.

## Maintenance of AAWT Signs & Markers

There will be logos and markers at the Mt Beauty Parks Victoria Office that can be distributed as needed. Totems should be kept at the relevant park depots.

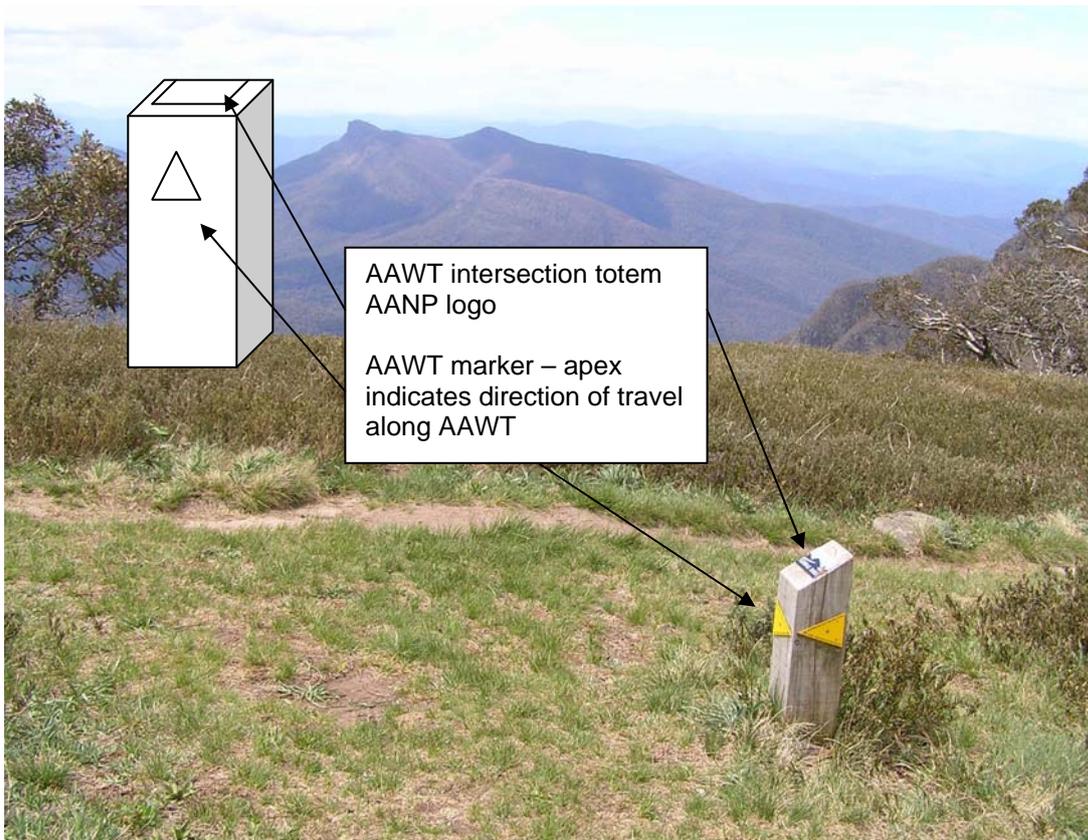

- It will be the responsibility of the relevant park staff to maintain the totems and signs in their area.
- Totems and signs will be maintained according to these Guidelines.

In Victoria some sections of the former Alpine Walking Track retain the non standard yellow diamond markers.

These markers will be removed where they create confusion from the current route or with exact direction of the track.

As the old diamond markers fall off or are grown-over they will be replaced with the standard AAWT yellow marker in accordance with the guidelines:

- in forested areas where there is only a faint foot pad
- in forested untracked areas
- in tracked areas, maximum 2-3 markers per kilometre.
- more frequently where confusion exists due to a multiplicity of animal tracks.
